

Metric	Collapse ranking at 60 min	Collapse ranking at 300 min	Spearman ρ	Mean $\Delta_{60 \rightarrow 300}$
Cumulative Distinct-5	1 conspiracy > AGI > Tech > Empty > 25 conspiracies > 5 conspiracies	1 conspiracy > AGI > Empty > 5 conspiracies > 25 conspiracies > Tech	0.60	-0.011
Cumulative gzip ratio	Tech > Empty > 5 conspiracies > AGI > 1 conspiracy > 25 conspiracies	1 conspiracy > Empty > AGI > 5 conspiracies > 25 conspiracies > Tech	-0.26	-0.008
Cumulative LLM collapse index	1 conspiracy > Empty > 25 conspiracies > Tech > AGI > 5 conspiracies	1 conspiracy > Empty > 25 conspiracies > Tech > 5 conspiracies > AGI	0.94	+0.053

Rankings run from greater to lower collapse. Lower Distinct-5 and gzip indicate greater collapse; higher judge index indicates greater collapse. The 300-minute value is the final available log for runs ending between 272 and 297 minutes. One run is available per condition, so confidence intervals are not estimated.
